SBC F Series

Size 30

Introducing the latest model of our flagship series!

The Fastest Left-Right Pipe Bender in Japan - Engineered for Speed and Precision!

The SBC F Series pipe benders utilize a rotary pull-bend system, combining the functionality of two single benders for both right-hand and left-hand bending operations.

It enables seamless bending of complex designs that were previously unachievable with a single machine due to interference during the bending process. By sequentially combining left and right bending methods and allowing the processed side to escape upward, **machine interference is eliminated**. Ideal for intricate bending applications such as **headrests and design furniture**, this bender is the **optimal solution for complex bending processes**.

Series Concepts

- Standard features include a 3-stack die, 7-axis numerical control (NC), and optimized specifications for enhanced performance.
- Robust power to meet the demands of today's high-tensile steel era.
- Keiyo Bend delivers the industry's fastest production speeds in bending, feeding, and rotating.
- The optional large radius bending function allows for more versatile and design-oriented processes!
